

# Brewer's Guide 2021

CELEBRATING 100 YEARS

PASSIONATE ABOUT MALT SINCE 1921

# Hello

At Muntons, our passion for malt embraces both traditional heritage and exciting innovation. Whether it is the research and development of new and existing beer recipes or troubleshooting and best practice, our team are on hand to provide guidance and support whenever it is needed.

Sustainability lies at the heart of everything we do, and what we plan to achieve in the future. We have always been driven to not only lead the industry with sustainable malting methods and reduce our carbon footprint, but to the manufacturing of 100% sustainable malt. This has been our ethos over the last 100 years, and we will continue to ensure that our industry is safeguarded for future generations.

# Meet The Team

*"If I were a beer, I would be a straight up, flagship IPA. It would be reliable, consistent, full of flavour and probably a little louder than other beers"*

## David Hannah

Brewing & Distilling Area Sales Manager  
Scotland & Northern England

✉ david.hannah@muntons.com

☎ +44 (0)7525 809093

🐦 @MuntonsDavid

After 4 years spent in FMCG sales, David joined the brewing industry in 2016 with Muntons Malt as their Craft Brewing Sales Manager for Scotland, looking after brewing accounts and new business development. In 2020 David became the Brewing and Distilling Area Sales Manager for Scotland and Northern England, managing craft, regional and national brewing and distilling accounts.

With a true passion for all things malt, beer and whisky, David can often be found sampling Scotland's finest in bars across his hometown of Glasgow.

*"If I were a beer, I'd be called Sunday Session – A Lively, fun and hoppy Saison. Bold and Zesty, a very sessionable, laid back and easy drinking beer."*

## Adam Darnes

Brewing Area Sales Manager  
Midlands, Yorkshire, Lancashire & North Wales

✉ adam.darnes@muntons.com

☎ +44 (0)7795 920922

🐦 @MuntonsAdam

Adam is Brewing Sales Manager for the Midlands, Yorkshire, Lancashire & North Wales. He has worked within the food & drink industry since 2003, after graduating with a food science degree. Adam has a passion for brewing and all things malt, in particular a beer or two. He believes strongly in giving customers great products and excellent customer service.

His love for beer was indoctrinated into him at a young age, with fond memories of weekend walks with his parents usually routed around a great beer pub at the end!

*"If I were a beer, I'd be a milk chocolate stout, full bodied and sweet, but with a rugged appearance."*

## Joseph Fifield

Brewing Area Sales Manager  
London, Southern England & Southern Wales

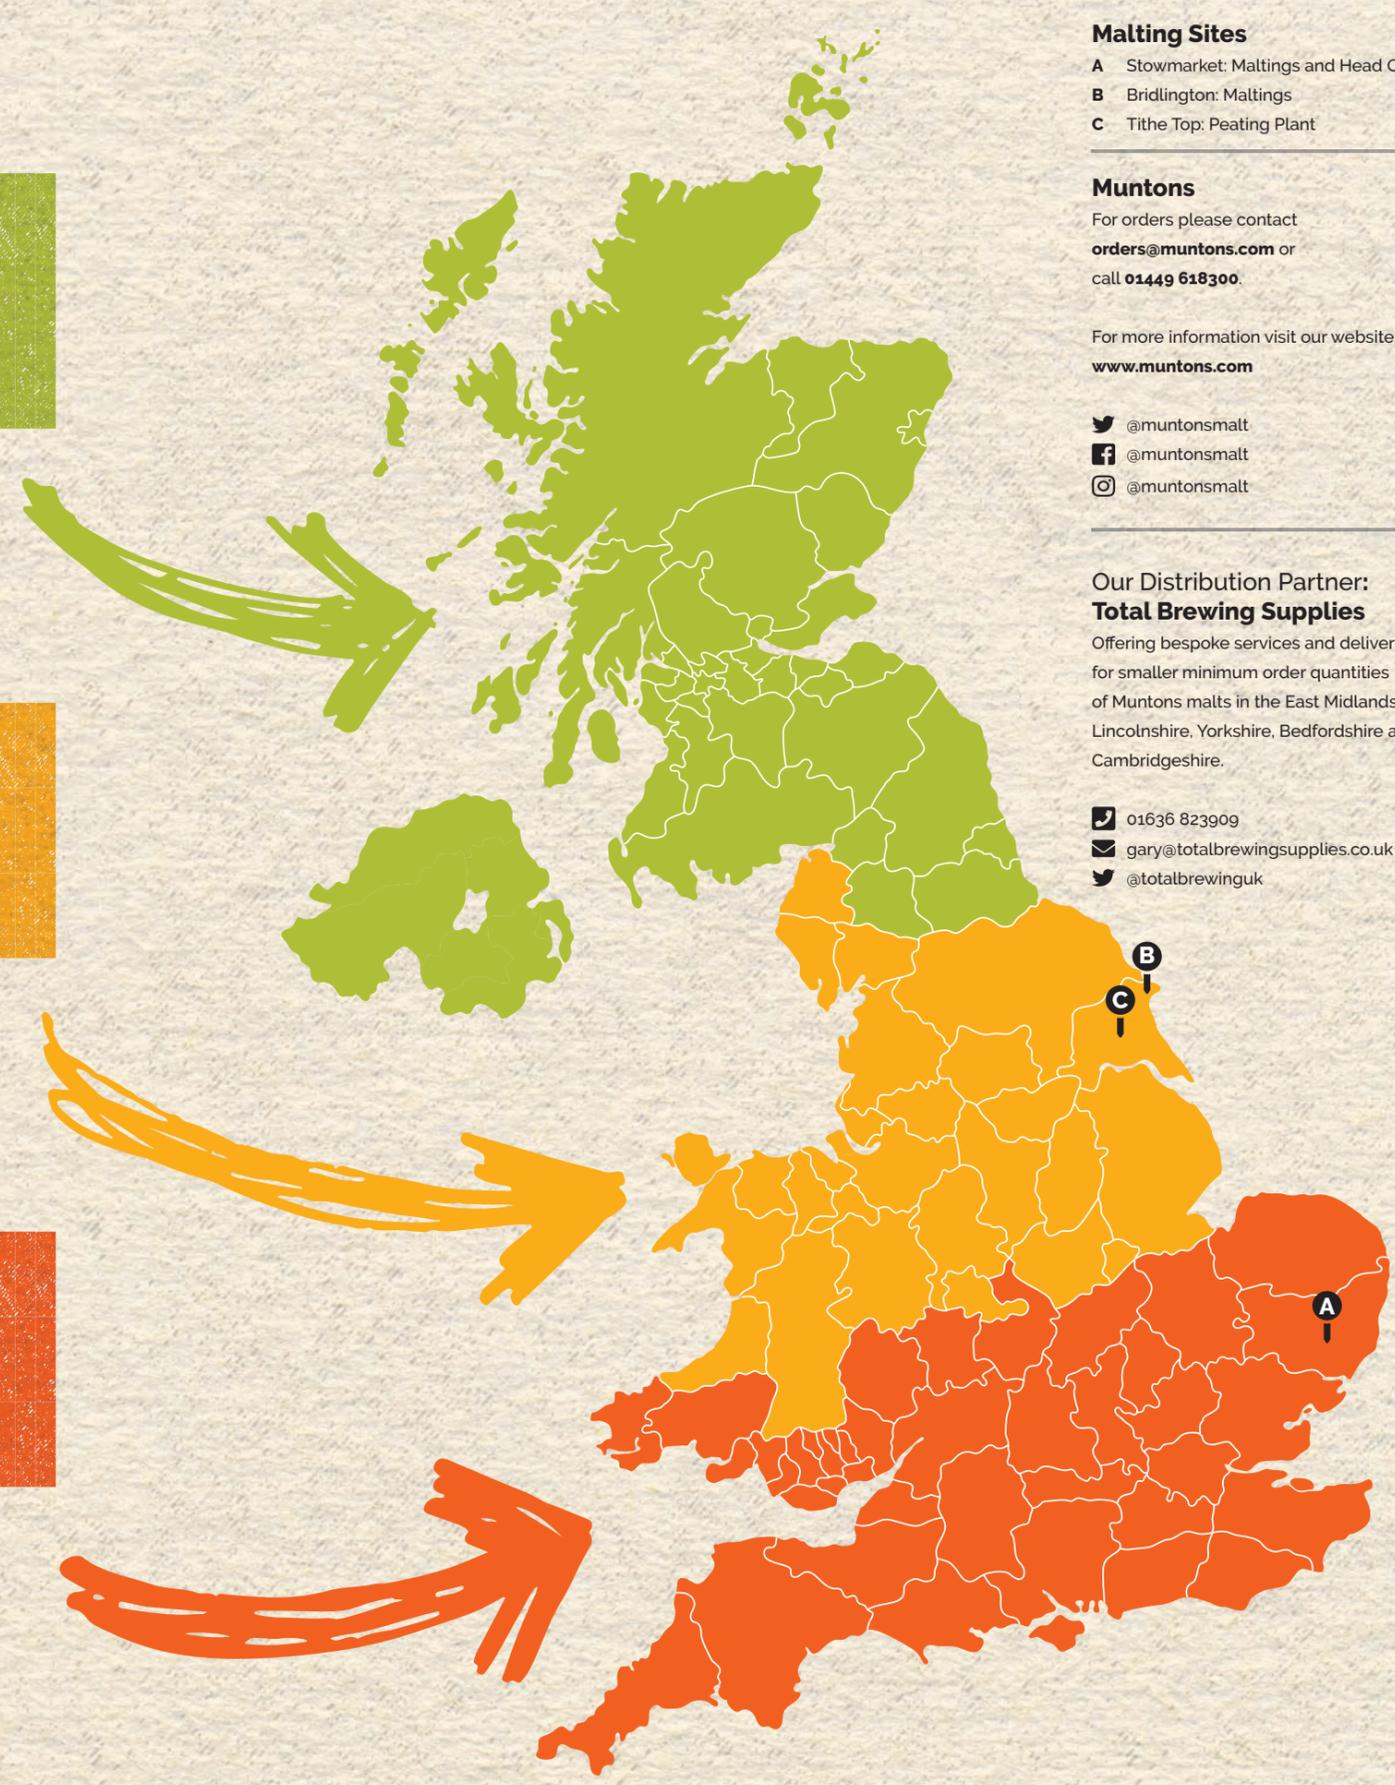

✉ joseph.fifield@muntons.com

☎ +44 (0)7583 048935

🐦 @MuntonsJoe

Joe is our Brewing Sales Manager for London, Southern England and Southern Wales. He joined Muntons as a management trainee after graduating with a degree in nutrition and human health. Joe has worked as part of the Maltings, Malt Extract and Barley Intake teams so has learnt a thing or two along the way.

His love of rugby was quickly followed by a love of beer, the two go hand in hand. The common factor in every rugby team is an after game beer with the team regardless of the result.

1948

**Moved to Stowmarket**

Muntons took over the 45 acre site, constructed originally for the British Nylon Spinners company, who vacated shortly after the war.

1976

**Cedars Maltings built at Stowmarket**

This new maltings picked its name from the cedar trees prevalent in the area, which also provided the name for the site address at that time, Cedars Factory.

2015

**Anaerobic Digester completed at Stowmarket**

A project which underlines our commitment to sustainability, our AD plant not only reduces waste and greenhouse gas emissions but contributes towards our demand for electricity.

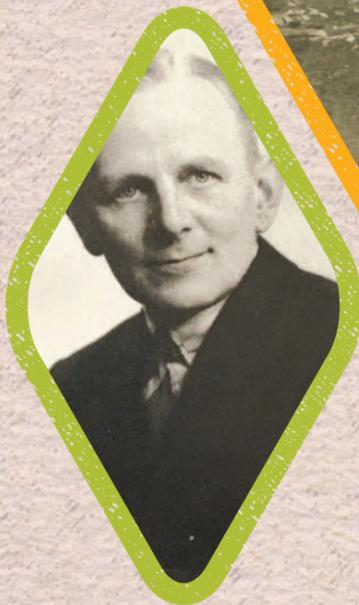

2020

**Malt extract capacity increased**

Evaporator three will mean that we are able to meet the growing demand for malt extract from our customers around the world.

**Refurbishment of germination boxes**

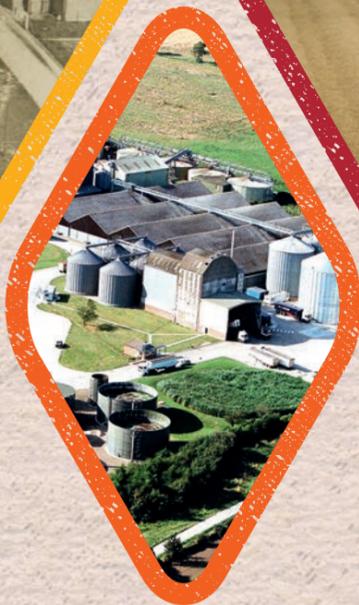

Updating and refurbishing the boxes will ensure many more years of service from the maltings at Stowmarket.

1921

**Muntons Incorporated**

Originally named Munton and Baker (Bedford) Ltd, derived from the name of the company creator: Munton Baker-Munton.

1964

**Expanded to Bridlington**

Construction of new maltings completed in the midst of the fine Yorkshire malting barley growing region, to supply northern breweries and the Scottish whisky distilling trade.

2007

**Singapore office opened**

Providing us with a locally based sales presence to simplify communication with our Asian customers and dramatically increase local awareness of our company and its products.

2009

**US company formed**

With significant trade in US homebrew and craft brewing, opening a US based company helped improve communication and access to this expansive market.

2019

**Peating plant built near Bridlington**

Located close enough to complete the malting process and introduce naturally phenolic peat flavours, the Tithe Top peating plant will help serve the growing needs of the scotch whisky industry.

**Biomass Boiler at Bridlington**

Producing the heat and energy needs of the site using biomass has reduced our corporate greenhouse gas emissions by 25%.

2021

**Celebrating 100 years**

As we move into our centenary year work begins on our new energy centre in Stowmarket. The centre will provide most of the steam, heat and electricity for our site and we are looking forward to the next 100 years as a strong, responsible and sustainable supplier of malt and malted ingredients.

# 100 Years & Counting

Celebrating our centenary year with strong heritage leading into the future with significant investment.

# Why brew with Muntons?

We work closely with traditional and modern breweries to find new and exciting ways to enhance beer recipes, improve efficiencies and create new and innovative products. We provide a full portfolio of brewing malts from crushed malt in sacks to whole malt in bulk and have speciality 'drum maltings' at our Stowmarket site allowing for more flexibility in meeting your needs.

We offer a range of liquid and dried malt extracts which are the perfect solution to common challenges brewers face, from increasing ABV using extra pale ale malt extract, to colour addition with ultra-dark malt extract.

## Quality

It is no coincidence that both Stowmarket and Bridlington maltings are in prime malting barley growing areas. Using the finest quality, locally grown raw material ensures that the products you buy from us are of the highest standard. The barley stored in each of our silos can be traced back to the farms and even the fields where it was grown. We have long-term partnerships with grain merchants and farmers, some of whom have grown barley for us every year for 30 years or more.

For more information on quality visit

<https://www.muntons.com/compliance/>

## 100% Sustainable Malt

We are proud to declare that our malt is 100% sustainable, a claim that has been externally verified with reference to the Farm Sustainability Assessment standard developed by the Sustainable Agriculture Initiative Platform (SAI). We are the only maltster to have set a science based target (<https://sciencebasedtargets.org/>) to reduce GHG emissions by 45% from 2010-2025 and we are already halfway to achieving that target which genuinely aligns with climate protection. Muntons is a founding member of a farmer technical support group to improve the supply chain sustainability and resilience of over 140 farmers through its Sustainable Futures Initiative. Our anaerobic digestion plant not only produces green electricity for use on site but creates a nutrient-rich fertiliser to supply local barley growers and we have a biomass boiler generating heat for our maltings in Bridlington.

If you want data on carbon footprinting in the malting and brewing supply chain, we are the one place you can be guaranteed to get an answer you can trust. For more sustainability information visit

<https://www.muntons.com/sustainability/>

## Expertise

Behind great malt, you'll find great people. At Muntons we have always understood the importance of our people in delivering the best possible products and service for our customers.

Our production team constantly seek to be the best they possibly can, with many achieving industry recognised qualifications such as general certificates, malting diplomas and the highly coveted Master Maltster!

This reflects the dedication and commitment our people have and allows us to offer expert technical support to you.

## Innovation

We have regular cross-functional innovation sessions in which we review the landscape of the brewing and malting industry. Supported by in-depth market research, the outcome of these sessions is new and innovative product ideas and technologies that are then reviewed and tested by industry experts within Muntons.

In addition to new products we are always looking to improve our own processes to drive sustainability, whether it be a more efficient cooling system for our kilns or new methodology in the extract filters.

We openly share knowledge gained through our market and industry research with our partners/customers to assist in new product development and product reviews. Our goal is to continuously generate new and exciting innovations that will empower our partners to deliver enjoyment to people's lives by creating more of what they love.

# Centre for Excellence

## We are here to help

Our technical brewing team are always on hand to assist with recipe development in our nano brewery, blending, preparation and fermentation facility.

The team have experience in turning concept recipes into retail quality samples which can then be assessed in our sensory room by our internal tasting panel. Once brewing analysis is completed the team will send you samples and a brew report for you to take to potential customers. As the world's largest malted ingredients supplier to the food and soft drink industry our expertise does not end with great beers. We are also able to help you develop recipes for hard seltzers, soft drinks, cordials, malted drinks, ready-to-drink products and even unique beer snacks. If it has malt in it, we can make it!

## Fancy a brew day with us?

If you want to try something new without interrupting your existing brewing process or do a trial run before scaling up, we can help and the best way to experience what we can offer is in person. On our brew days you will not only see how your recipe progresses, but you will also receive a tour of the maltings, mill and extract factory. As an existing customer get in touch with our sales team to arrange a day. Not yet a Muntons customer? We are still happy to offer a Brew Day and assist in your development for a fee.

At Muntons we don't just supply malt, we offer full customer support, access to dedicated equipment and technical minds that are up for a challenge. We are happy to assist in all matters, whether it's grain handling, brewing efficiency or general brewing queries.

## Something technical? Ask Fabian

*"I'm from Bavaria but I'm not bubbly enough to be a lager so I'd be a Bavarian Zwickl. Relaxed and easy to get along with, plus it's really good drinking!"*

**Fabian Clark**  
Senior Brewing Technologist

✉ [fabian.clark@muntons.com](mailto:fabian.clark@muntons.com)

☎ +44 (0)7583 015208

🐦 @MuntonsBrewTec

Fabian Joined Muntons as the New Product Development Brewing Technologist in 2017 after completing a degree in brewing and beverage technology in Germany. As part of his role at Muntons Fabian has been involved with the development of new malts and malt extracts as well as recipes, trial brewing and sensory evaluation for customers of all sizes.

His knowledge and love of brewing is why he has been asked to present at seminars and training days for brewers all over the world.

# Malt Flavours

## Characteristics by malt type

<b>Caramel</b>	Crystal up to colour 110 EBC, Caramalt	<b>Cereal</b>	Wheat, Ale
<b>Coffee</b>	Chocolate, Black	<b>Sweet</b>	Ale, Amber, Munich
<b>Chocolate</b>	Very dark Crystal	<b>Burnt</b>	Black, Roasted Barley or Malt
<b>Treacle</b>	Crystal over 240 EBC colour	<b>Nutty</b>	Caramalt, Ale
<b>Smoky</b>	Smoked/Peated	<b>Green</b>	Lager, High Enzyme, Diastatic
<b>Phenolic</b>	Peated	<b>Sulphury</b>	DMS, Lager, Sulphitic and Sulphidic
<b>Fruity</b>	Crystal colour up to 110 EBC, Munich	<b>Solvent</b>	Should not be present in any malt type
<b>Bitter</b>	Chocolate, Black	<b>Toffee</b>	Crystal up to colour 240 EBC

## Flavour Wheel

### Malt sensory analysis

Although malt tasting is not currently any part of the malt specification, it does offer possibilities to differentiate both positive and negative flavours. Conventional malt analysis may suggest that malts are identical however their flavours could well differ significantly.

We use a method to fully describe the profile of malt using a 'porridge' made by grinding whole malts with a small amount of water which helps in the tasting process.

The malt flavour wheel has allowed us to create distinct flavour profiles for the wide range of malts and malted ingredients we produce.

# Super Pale Ale Malt

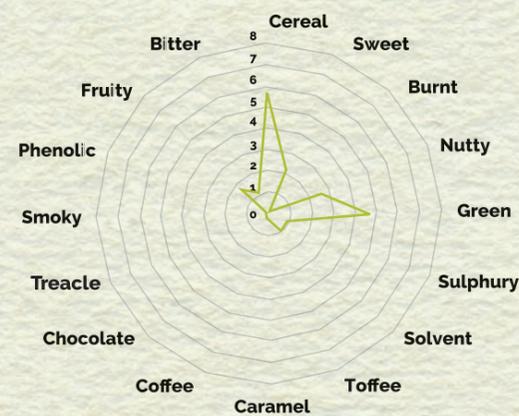

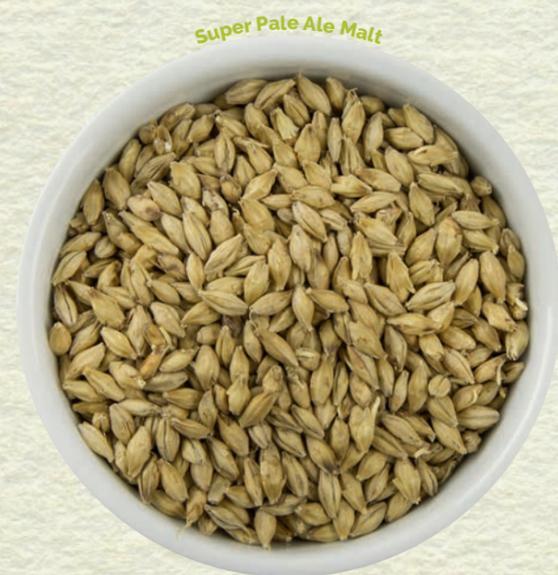

This exceptionally pale malt is ideal for brewers looking to create the palest ales possible while still retaining sufficient body to ensure a full mouthfeel. Super pale has been created with two main points in mind: As low a colour as possible and the ability to pair really well with hops. By using a specifically developed combination of germination and kilning profiles, this malt achieves a full flavour profile, very akin to an Extra Pale Ale Malt, whilst only developing two-thirds of its colour.

### Applications:

The light colour and clean flavour profile of Super Pale Ale Malt lend themselves to multiple beer styles. Using this exceptional malt, brewers can create extremely low colour beer with reddish and copper hues, a characteristic which also lends itself to the creation of vibrantly coloured fruit-beers. Here, the low colour of the malt allows the colour of the selected fruit of choice to really shine through. Super Pale Ale Malt is our lightest pale malt, and is ideally suited for IPA, bitter, golden ales, and light beers.

### Typical Analysis:

Parameter	Unit	Super Pale Ale
Moisture	%	≤ 6
Extract (dwt, 0.7mm grind)	L <sup>+</sup> /KG	≥ 360
Total Nitrogen (dwt)	%	≤ 1.7
Wort Colour (IOB 515ml)	EBC	≤ 2

# Pilsner & Lager Malt

The craft beer movement having concentrated largely on traditional ales, porters and stouts is now showing interest in lager. Traditional bottom fermented lagers, matured or 'lagered' for weeks or months at low temperatures, develop a character and drinkability far removed from the chill filtered, highly carbonated beers traditionally sold as lager in the UK.

Muntons Pilsner Malt has been malted to provide the perfect base for a craft lager. This malt, which is related to our traditional Lager Malt, has its very own production profile, which ensures that the brewing process will be as smooth as possible. With our Pilsner Malt, we have slightly increased the modification and reduced the Beta Glucan level by 45%. Not only does this improve the brewing performance of our Pilsner Malt but it also adds flavours reminiscent of honey and freshly baked biscuits.

### Applications:

A further benefit of our Pilsner Malt is its high level of enzyme activity - both DP and DU. This will increase the speed of starch conversion and increase the attenuation levels of the beer. When brewing, we recommend mashing at 62 - 63°C for a traditional lager. Please keep the gelatinisation temperature of your crop in mind. For more information ask your usual Muntons sales contact.

### Typical Analysis:

Parameter	Unit	Pilsner	Lager
Moisture	%	≤ 5	≤ 5
Extract (dwt, 0.7mm grind)	L <sup>+</sup> /KG	≥ 308	≥ 308
Total Nitrogen (dwt)	%	≤ 1.8	≤ 1.85
Wort Colour (IOB 450g)	EBC	≤ 3.7	≤ 4

## Planet - Pale Ale & Extra Pale Ale Malt

Planet is a spring barley variety, now replacing Propino as the most popular spring brewing variety of malting barley grown in the UK. Planet has proved to be so versatile, it has become a very widely grown cereal variety. We are blessed in the UK with arguably the prime climate for barley growing. Couple this with the extreme care taken during the malting process by our malting team, and the result is outstanding. Our Pale and Extra Pale malts made from Planet malting barley are considered by many to be some of the finest Spring barley malts available.

### Applications:

Planet has a high yield and performs very well in the brewhouse. We recommend a mashing temperature of at least 65°C as this is the average gelatinisation temperature for this variety. Mashing at a lower temperature could cause a slow conversion or even stall as the starch might not fully gelatinise. Planet has a cereal-forward taste complemented with a mild nuttiness, imparted because of its slightly higher attenuation level. It has a lower 'masking' effect than Venture or Maris Otter® leading to an increase in the impact of aroma hops and yeast aromas. Care must be taken as this also means that any brewing errors are less easily covered. In our tests, Planet has performed very well and feedback from brewers using this variety has been very positive, particularly with extract levels and flavour profiles. This traditional pale malt is ideal for classic top fermented beers. Suitable for IPA's, bitters, golden ales and light beers. Pale is slightly darker and "maltier" than lager malt, whilst the extra pale is similar in colour to lager malts but with pale malt qualities.

### Typical Analysis:

Parameter	Unit	Pale Ale	Extra Pale Ale
Moisture	%	≤ 4	≤ 5
Extract (dwt, 0.7mm grind)	L*/KG	≥ 310	≥ 310
Total Nitrogen (dwt)	%	≤ 1.65	≤ 1.65
Wort Colour (IOB 450g)	EBC	4 - 6	≤ 4

## Craft - Pale Ale Malt

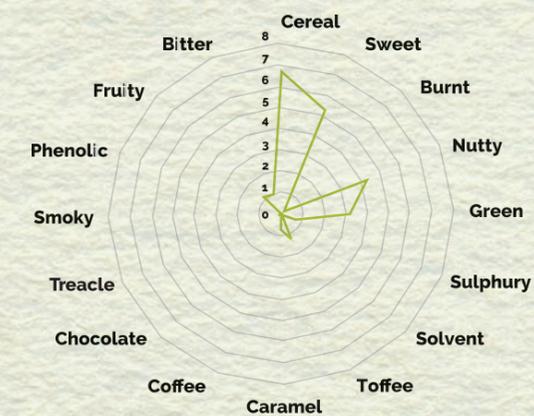

Craft is a new contemporary winter barley variety taking the place of Venture in the Muntons range and is a natural replacement for other winter varieties such as Pearl and Halcyon. Craft Pale has the most malt-forward flavour profile of all Muntons pale malts and produces a smooth and sweet wort with notes of toffee and strawberry.

### Applications:

Craft is an excellent choice for malty and high-alcohol beers like old ale, strong ales, barley wine, American and British-style amber ales, porters, or stouts. In New England IPAs where a superior malt backbone is desired, Craft is a great choice. Craft's underlying flavour pairs nicely with London III and Vermont Ale yeasts. It works exceedingly well in malt-forward Blonde Ales that are popular with drinkers new to craft beer. Use this malt with light-coloured specialty malts like Amber Malt and/or Caramalt 30 in a beer with less than 25 IBUs to make an approachable, entry-level Blonde Ale.

### Typical Analysis:

Parameter	Unit	Pale Ale
Moisture	%	≤ 4
Extract (dwt, 0.7mm grind)	L*/KG	≥ 310
Total Nitrogen (dwt)	%	≤ 1.65
Wort Colour (IOB 450g)	EBC	4 - 6

# Maris Otter® - Pale Ale & Extra Pale Ale Malt

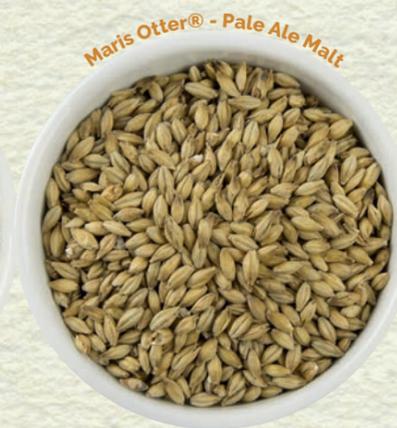

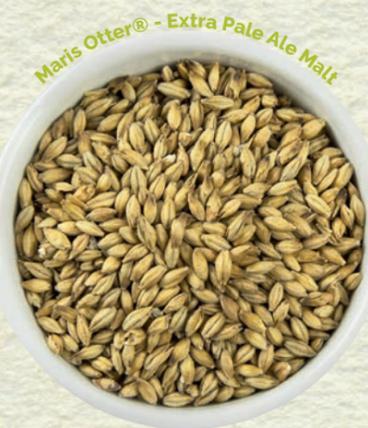

Malting barley varieties are typically grown for five to ten years, until they are superseded by newer, higher yielding and more robust varieties. Maris Otter® however is an exception to this rule. Although there have been many varieties with higher yields and extracts, none have managed to remove Maris Otter® from its position as one of the longest surviving and best known varieties. Its characteristic taste and outstanding processability, coupled with its historic significance make this a variety likely to remain a craft brewing favourite for many years to come.

### Applications:

Brewers looking for extra malt flavour, should consider this traditional malt; this British staple – Maris Otter®. Introducing strong cereal, biscuit and nutty notes in beer, Maris Otter® remains one of the most popular malt varieties available for the serious craft brewer.

### Typical Analysis:

Parameter	Unit	Pale Ale	Extra Pale Ale	Pale Blend
Moisture	%	≤ 4	≤ 5	≤ 4
Extract (dwt, 0.7mm grind)	L*/KG	≥ 308	≥ 310	≥ 308
Total Nitrogen (dwt)	%	≤ 1.65	≤ 1.65	≤ 1.65
Wort Colour (IOB 450g)	EBC	4 - 6	≤ 4	4 - 6

# Organic Ale Malt

Our organic malts are made from barley grown in a farming system without using man-made fertilisers, pesticides, growth regulators, irradiation or through genetic modification. All of our organic products are regulated under the Organic Food Federation. Organic malt will inevitably have a wider specification than non-organic malts, as only relatively small quantities of organic barleys are grown and available for maltsters to purchase.

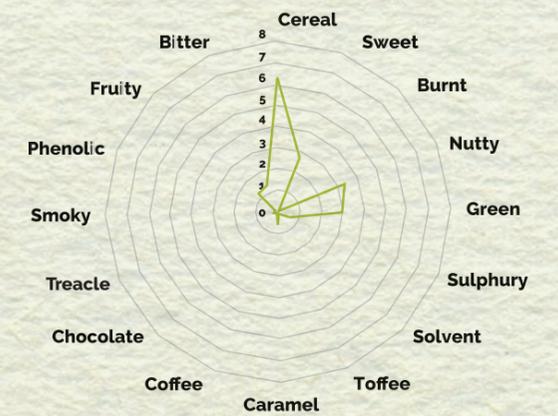

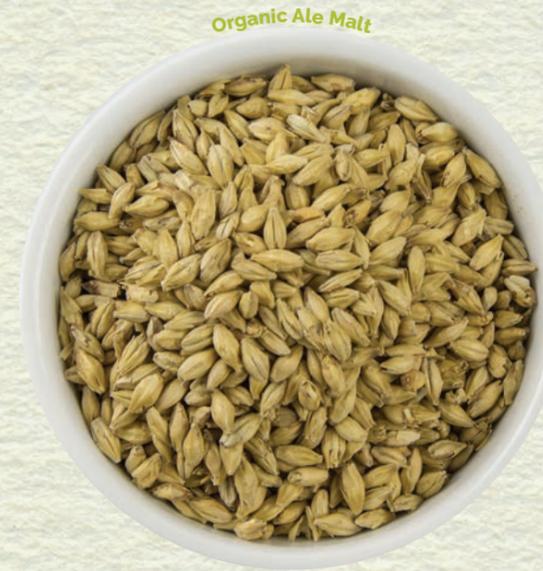

Beers made from Organic Ale malt will appeal to consumers seeking to uphold the values which organic farming methods follow and will therefore hold an appeal to this niche market.

We are a member of the Organic Food Federation and ensure that the organic malting barley and the products we make are fully compliant with their guidelines. Our organic malts provide an ideal base for the brewer looking to brew a quality organic beer. As organic malting barley is grown under completely natural conditions the specification may well vary more widely than barley grown using accepted traditional methods, where fertilisers and pesticides may well have been used.

As such, malts made organically will also have a slightly wider specification than other non-organic malts. We ensure that all our organic products are of the highest possible quality and are ideal for brewers looking to craft beers which will appeal to the growing community of organic consumers. As a base material, organic malts can be used to brew an extensive range of beer styles, from light delicate pilsners to robust stouts and porters.

### Typical Analysis:

Parameter	Unit	Organic Ale
Moisture	%	≤ 4.5
Extract (dwt, 0.7mm grind)	L*/KG	≥ 290
Total Nitrogen (dwt)	%	≤ 1.7
Wort Colour (IOB 450g)	EBC	≤ 10

## Mild Malt

We have been making the finest malts for nearly 100 years, and during that time beer styles have come and gone. One beer style we are particularly happy to see return is the traditional British Mild. The return to fashion of this classic beer style has meant that we could once again make a mild ale malt confident of interest from the market. Our Mild Malt is made from British winter barley, which makes it very consistent and reliable. The germination and kilning profiles are adjusted to create a malt which will bring increased sweetness and body in the beer, ideal for brewers aiming to reproduce this historically significant beer. It is the slightly decreased fermentability of our Mild Malt, which imparts this more malty and sweet flavour.

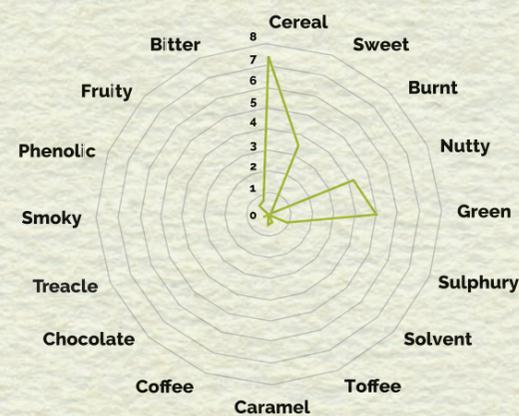

### Applications:

Mild Malt is a great base material for no and low alcohol beer. Also, when used in conjunction with our Cara Malt 10 and our innovative new Muntons Sour Malt Extract, we were able to develop a perfectly balanced and very drinkable 0.5% ABV Ale. Muntons Mild Malt is ideal for mild ales, stouts and porters. It is slightly sweeter than pale malt and safe to use with high ratios of adjuncts.

### Typical Analysis:

Parameter	Unit	Mild
Moisture	%	≤ 4
Extract (dwt, 0.7mm grind)	L*/KG	≥ 308
Total Nitrogen (dwt)	%	≤ 1.65
Wort Colour (IOB 450g)	EBC	5 - 7

Mild Malt

## Dextrin Malt

Dextrin malt is carefully made to ensure that a high percentage of unfermentable sugars are retained without the malt picking up excessive colour. This makes it ideal for light beer styles where the core flavour profile will not be lost. Dextrin malt is designed to provide body, improve mouthfeel and fullness to beers without adding caramel-like flavours often associated with darker crystal malts. The malt still has some enzyme activity and can be included in ratios of up to 30%. At high dosage rates of 20 -30%, this malt will slightly reduce the overall attenuation and add body and sweetness to the beer. In modern no and low alcohol beers, it has the potential to be used in very high dosages of 50 -75% as it will give the beer a solid highly flavourful base that is not as fermentable as a typical wort.

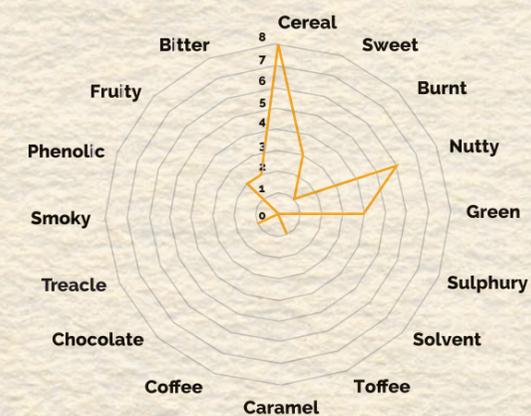

### Applications:

Dextrin malt shows its strength in highly attenuated beers such as Lagers, Brut IPAs, Saisons and Wild fermentations. The high percentage of dextrins and complex sugars add a depth to these beer styles preventing beers becoming too thin or too dry. Try a modest inclusion of 2-3%, and see for yourself how it can enrich your beer.

### Typical Analysis:

Parameter	Unit	Dextrin
Moisture	%	≤ 7
Extract (dwt, 0.7mm grind)	L*/KG	≥ 250
Total Nitrogen (dwt)	%	≤ 1.65
Wort Colour (IOB 450g)	EBC	≤ 7

Dextrin Malt

## Munich & Vienna Malt

Munich and Vienna malts originated in Germany, historically used in bocks and dark lagers, although they are now proving a popular addition in a wide variety of craft beers. These are highly kilned malts which have some residual enzymes.

Both Vienna and Munich malts provide rich malty flavours and aromas. They will raise the malt profile in beer without adding too much colour. Vienna can be a great base for golden ales or Vienna lagers.

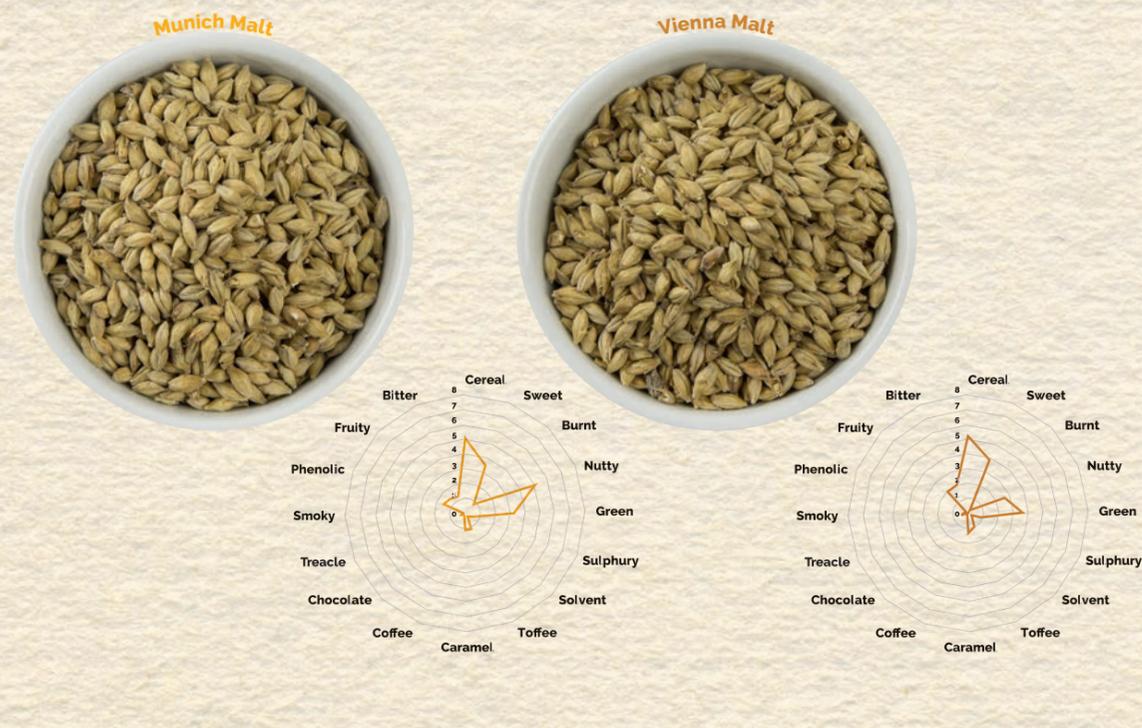

### Applications:

**Munich Malt:** Suitable for any beer giving fuller body and rich toasted, biscuit and bready flavours.

**Vienna Malt:** Suitable for lagers and continental beers, in between Pale and Munich, golden and full bodied.

### Typical Analysis:

Parameter	Unit	Munich	Vienna
Moisture	%	≤ 8	≤ 8
Extract (dwt, 0.7mm grind)	L°/KG	≥ 290	≥ 308
Total Nitrogen (dwt)	%	≤ 1.8	≤ 1.65
Wort Colour (IOB 515ml)	EBC	12 - 20	7 - 12

## Cara Malts

Cara Malt 10 is Muntons lowest colour crystal malt. With its light colour and mild flavour, Cara Malt 10 can be added to even the lightest beer styles without affecting the core flavour profile. This malt is designed to bring body, improve mouthfeel and add character to beers, although the degree of effect will depend on the rate at which Cara Malt 10 is added. As the Malt is only partially crystallised, and still has some enzyme activity, it can be included in ratios of up to a maximum of 30% in traditional beer styles. At higher dosage inclusions, (20 - 30%) the overall attenuation will be reduced but it will introduce added body and sweetness to the beer. In modern no and low alcohol beers, which are rapidly growing in popularity, it has the potential to be used in exceptionally high dosages of 50 - 75%. At these levels it gives the beer a solid highly flavourful base which is not as fermentable as a more typical standard wort.

### Applications:

Highly attenuated beers such as Lagers, Brut IPAs, Saisons and Wild fermentations really benefit from the inclusion of some Cara Malt 10, as the high percentage of dextrins and complex sugars bring a depth to these beer styles reducing the chance that the beer might be too thin or too dry. Just a small inclusion of 2 - 3% is ideal.

Cara Malt 30 has a slightly darker and more intense flavour profile than Cara Malt 10. It is suitable for IPA, bitter, mild, stout, porters and golden ales. The colour is golden offering a toffee/caramel flavour.

### Typical Analysis:

Parameter	Unit	Cara 10	Cara 30
Moisture	%	≤ 8	≤ 8
Extract (dwt, 0.7mm grind)	L°/KG	≥ 304	≥ 290
Wort Colour (IOB 515ml)	EBC	≤ 12	22 - 43

# Crystal Malts

Muntons crystal malts are available in a range of colours and flavour intensities, offering the brewer a wonderful palate of ingredients to craft the beer they wish to create. Crystal Malts are made by transferring germinating 'green' malt to a roasting drum where a partial starch conversion takes place within the grain, creating sweet, 'crystallised' or 'caramelised' malt sugars. By selecting the correct crystal malt the brewer can introduce interesting colour hues as well as fruit, toffee, coffee, treacle and even chocolate notes to beers.

### Applications:

Suitable beers include IPA, bitter, mild, stouts and porters. Copper/red/amber in colour with sweet toffee, biscuit, nutty, malty flavours that increase as colour increases. Starches are crystallised.

### Typical Analysis:

Parameter	Unit	110	150	240	400
Moisture	%	≤ 7	≤ 7	≤ 7	≤ 7
Extract (dwt, 0.7mm grind)	L <sup>+</sup> /KG	≥ 285	≥ 280	≥ 275	≥ 270
Wort Colour (IOB 515ml)	EBC	110	150	240	400

# Amber & Brown Malt

Amber and Brown malts have their roots firmly planted in the past. Originally used to impart colour and flavour in darker beers such as browns and porters, these malts fell out of fashion as brewers and consumers drifted towards lighter coloured and weaker beer styles. The growth in craft brewing and demand for interesting beers has enabled maltsters to bring back into production these classic lightly roasted malts. Muntons Brown Malt is a British specialty malt made by using traditional malting techniques and the highest quality of British barley.

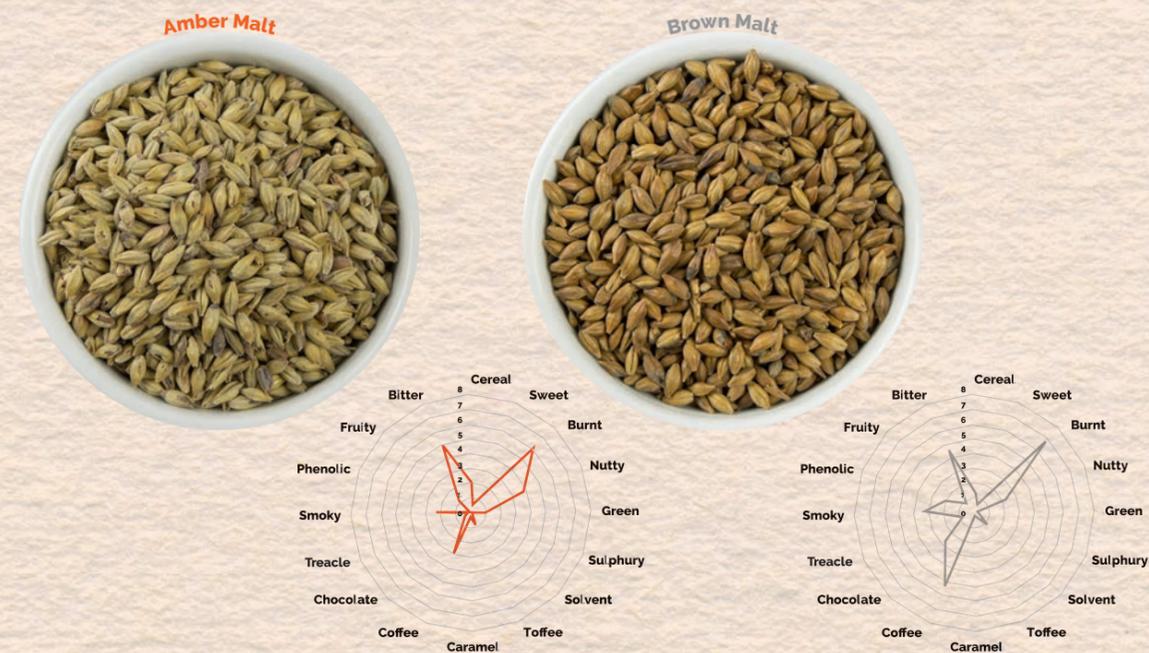

### Applications:

**Amber Malt:** Suitable beer styles include Mild, Bitter, Ales, IPA, Brown Ale, Stout, Porter. Straw/golden in colour with nutty light toast flavours.

**Brown Malt:** Suitable beer styles include Mild, Bitter, Ales, IPA, Brown Ale, Stout, Porter. Brown/dark amber in colour offering coffee, roast, strong toast flavours.

### Typical Analysis:

Parameter	Unit	Amber	Brown
Moisture	%	≤ 3	≤ 3
Extract (dwt, 0.7mm grind)	L <sup>+</sup> /KG	≥ 270	≥ 250
Wort Colour (IOB 515ml)	EBC	40 - 75	130 - 170

## Light Chocolate & Chocolate Malt

Light Chocolate and chocolate malt are our go to roasted malts for colour and flavour additions. These malts add notes of coffee, burnt toast and dark chocolate. Inclusions of up to 5% are recommended in dark beer styles. These malts are the perfect choice for brown ales, stouts, porters and any other dark beer requiring a smooth dark flavour.

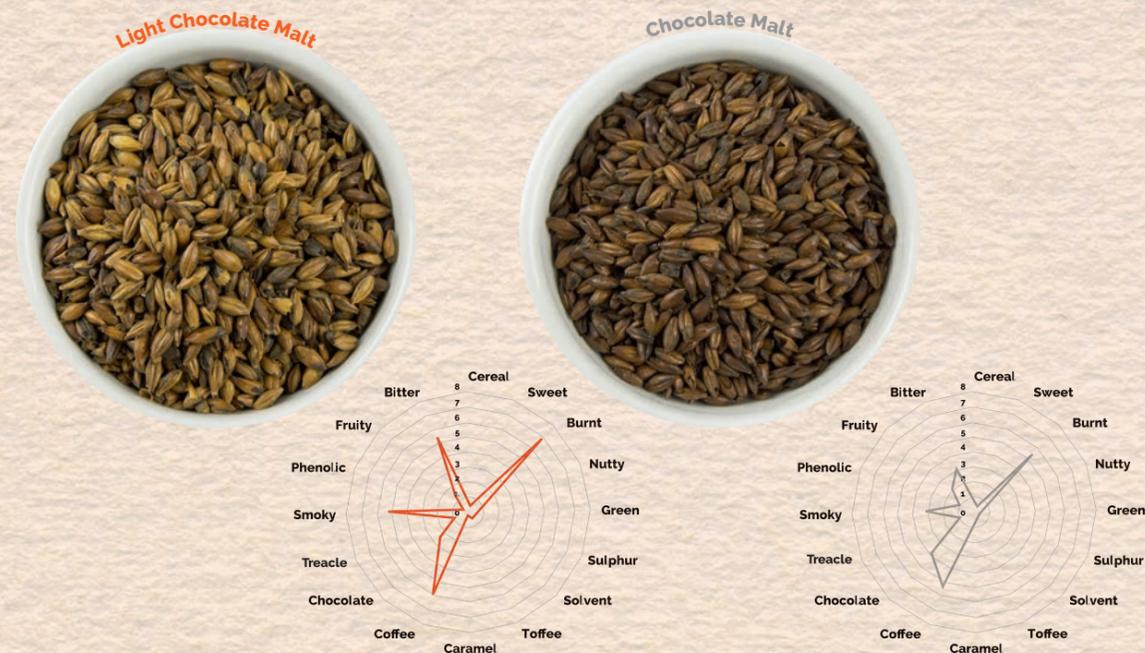

### Applications:

**Light Chocolate Malt:** Suitable beer styles include Mild, Bitter, Ale, IPA, Brown Ale, Stout, Porter.

**Chocolate Malt:** Suitable beer styles include Mild, Bitter, Ale, IPA, Brown Ale, Stout, Porter. Dark brown/ruby colour, offering burnt coffee/chocolate bean and bitterness.

### Typical Analysis:

Parameter	Unit	Light Chocolate	Chocolate
Moisture	%	≤ 7	≤ 6
Extract (dwt, 0.7mm grind)	L°/KG	≥ 200	≥ 200
Wort Colour (IOB 515ml)	EBC	380-440	850-1200

## Black Malt & Roasted Barley

Black Malt is our darkest roasted malt. It imparts a strong roasted character and can be used in very small amounts to add a darker colour to beers. Notes of burnt coffee and high cocoa chocolate can be achieved.

Roasted barley is made using un-malted barley, because of this it is able to impart a drier finish to dark beers as the starches in the grain have not been modified prior to the roasting process. This grain is perfect to use when making a dry stout or black or Baltic porter.

### Applications:

Inclusions of these product can range from 1-6% to add high amounts of colour and flavour. When used in higher ratios, the low extract and fermentability need to be accounted for to ensure the beer finishes with the correct mouthfeel.

**Black Malt:** Suitable beer styles include Mild, Bitter, Ales, IPA, Brown Ale, Stout, Porter.

**Roasted Barley:** Beer styles include Mild, Bitter, Ales, IPA, Brown Ale, Stout, Porter.

Dark brown/black colour with burnt toast, charcoal, dry, bitter flavours.

### Typical Analysis:

Parameter	Unit	Black	Roasted Barley
Moisture	%	≤ 7	≤ 6
Extract (dwt, 0.7mm grind)	L°/KG	≥ 200	≥ 200
Wort Colour (IOB 515ml)	EBC	1400	1500

# Wheat Malts

In addition to our barley malts, we supply a range of other malted cereals.

**Wheat Malt** is a great addition to any beer requiring a boost in mouthfeel or head retention. This malt is also superb in in Belgian, American and German wheat beer applications. Inclusion can be up to 55% as long as the mash and sparge are adjusted to account for the husk, missing from wheat.

**Melanoidin Wheat Malt** is one of our newer malts. This highly kilned wheat malt is made using a unique kilning profile and is able to add all the protein related benefits of a wheat malt while also adding the colour and flavour of dark Munich and amber style malts.

### Applications:

Addition rates can range from 1-5% for a modest mouthfeel and flavour and up to 20% for intense toast and biscuit notes, paired with an intense dark flavour.

### Typical Analysis:

Parameter	Unit	Wheat	Melanoidin
Moisture	%	≤ 7	≤ 6
Extract (dwt, 0.7mm grind)	L°/KG	≥ 316	≥ 200
Wort Colour (IOB 515ml)	EBC	≤ 5	60 - 120

# Oat Malt and Rye Malt

Oat and Rye are speciality malts made in our small batch drum maltings. These products are the perfect addition to beers demanding unique and interesting flavour profiles.

**Rye Malt** adds a nutty and fruity quality to beers and will significantly increase the mouthfeel when used at high rates. Due to its lack of husk, Rye Malt must be treated in the same way as wheat malt to ensure there are no run-off issues during brewing. This malt shines in IPAs, golden ales and rye variants of traditional beer styles.

**Oat Malt** will give the beer typical oat flavours reminiscent of breakfast porridge. The product has high levels of fatty acids which enable this malt to add a fine and stable haze to beers without having to reach for un-malted adjuncts. The protein structure of the oats add a creamy mouthfeel to beers. The strong husk on oat malt enables high inclusions without causing any processing issues.

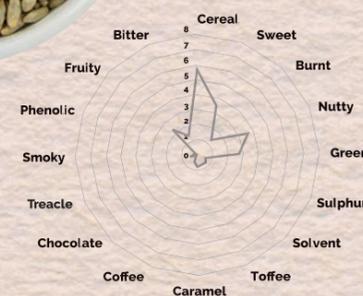

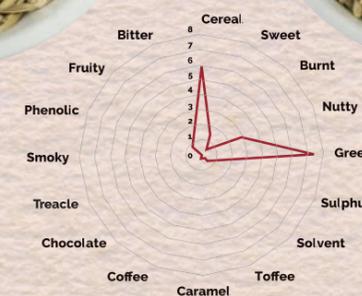

Oat Malt is best for breakfast stouts, NEIPAS and other hazy and smooth beer styles.

### Applications:

The inclusion rates for both of these malts can be up to 50%, taking into consideration that the rest of the grist will need to include high enzyme barley malt to ensure conversion.

### Typical Analysis:

Parameter	Unit	Oat	Rye
Moisture	%	≤ 5.5	≤ 6
Extract (dwt, 0.7mm grind)	L°/KG	≥ 230	≥ 305
Wort Colour (IOB 450g)	EBC	≤ 7	4 - 10

## Torrefied Wheat

Adding torrefied wheat to a brew at 2-5% is a well known and reliable way of adding a complex protein matrix to your beer whilst maintaining stable head formation and retention. With the rise of the NEIPA, hazy and smooth beer is becoming more popular. We thought it would be really interesting to try out our torrefied wheat in a NEIPA and it worked really well. At an inclusion of 15- 20% we achieved a stable haze and a solid mouthfeel that pair perfectly with a citrusy hop addition.

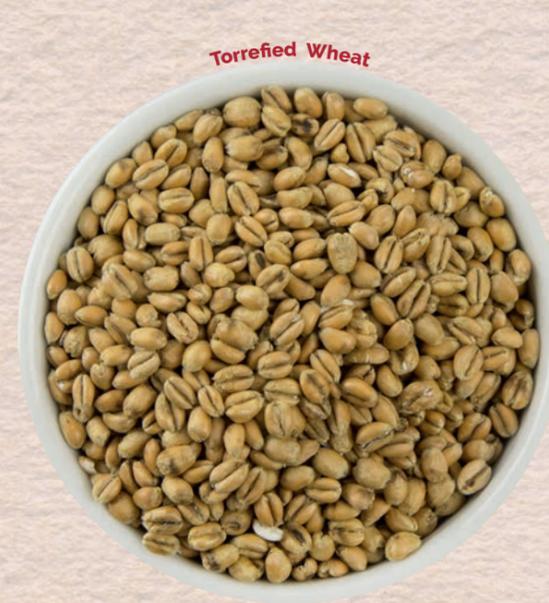

We also tried 50% torrefied wheat in a typical wheat beer recipe which produced a more cereal and grain forward taste making a refreshing summer wheat beer.

### Applications:

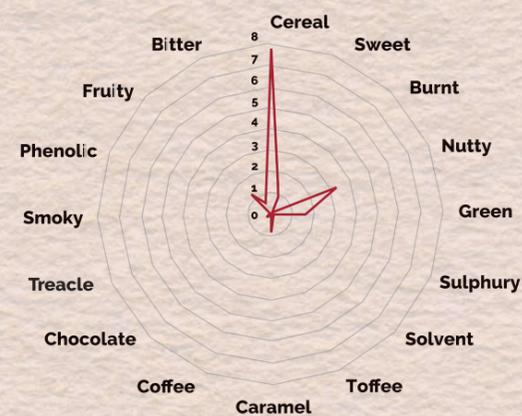

Suitable for all beer styles. Ideal for mouthfeel and head retention. We recommend trying out a high inclusion of torrefied wheat 10-15% to add a smooth mouthfeel and give a stable haze to your beers.

### Typical Analysis:

Parameter	Unit	Torrefied Wheat
Moisture	%	≤ 7
Extract (dwt, 0.7mm grind)	L°/KG	≥ 280
Wort Colour (IOB 515ml)	EBC	≤ 6

Torrefied Wheat

## Dark Crystal Rye Malt

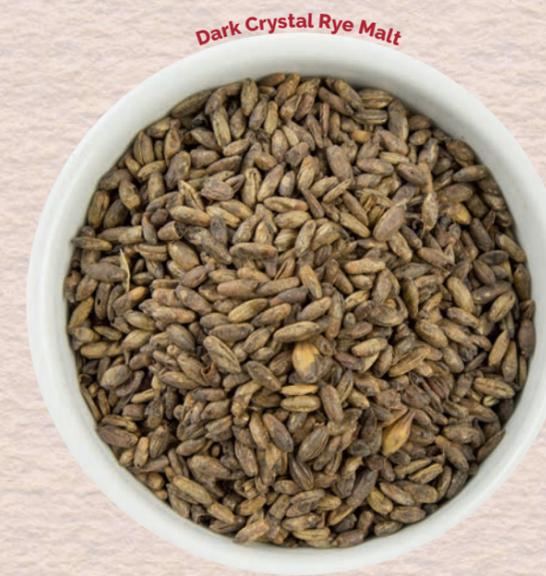

We offer a wide range of speciality malts ranging from low colour crystals to highly roasted black malts. One of the more unusual amongst our wide range of speciality malts is Dark Crystal Rye Malt which is a particular favourite of ours. It has a colour of 230 EBC so if you want a red colour to your beer this malt is the answer. The addition of 10 - 15% to a pale base will introduce a lovely red hue to your beer. This highly aromatic, caramelised rye is perfect for adding breadcrust notes and bringing a touch of sweetness to any recipe. When incorporated in the grist at high inclusion rates, it delivers flavours reminiscent of hazelnut and toffee. When used in conjunction with extra low colour Ale Malts such as our Super Pale they balance perfectly, as they allow more of the intense copper colour to shine through.

### Applications:

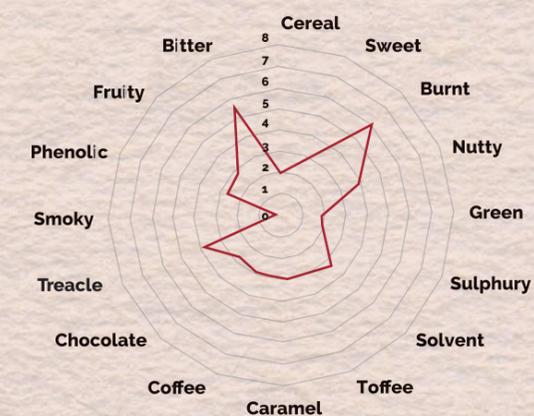

Suitable for all beer styles. Ideal for mouthfeel and head retention. We recommend trying out a high inclusion of torrefied wheat 10-15% to add a smooth mouthfeel and give a stable haze to your beers.

### Typical Analysis:

Parameter	Unit	Dark Crystal Rye
Moisture	%	≤ 5
Extract (dwt, 0.7mm grind)	L°/KG	≥ 270
Wort Colour (IOB 515ml)	EBC	≤ 230

Dark Crystal Rye Malt

# Flakes

Muntons Flakes are lightly toasted and pre-gelatinised. They can be used in a wide variety of brewing applications. The light toasting of our flakes brings an interesting complexity to the flavour and aroma of beers, whilst also adding depth, although they are predominantly used because of the benefits they bring to mouthfeel and body. Our malted flakes will impart an amber to copper colour hue if used in high amounts.

### Applications:

**Toasted Barley Flakes:** Suitable for Stouts, Cream Ales and NEIPAs due to their balanced cereal-forward taste. We would recommend an inclusion rate of 2 - 7% for Stouts and Cream Ales and up to 15% for NEIPAs. This should be varied depending on the style of beer and the desired body – use a little less for lighter beer styles. It works particularly well in hop-forward beers because of its clean and balanced flavour profile.

**Malted Rye Flakes:** Great for adding a nutty and toasty flavour at inclusion rates of 5%.

**Malted Wheat Flakes:** Will help with the creation of a stable haze while adding a smooth mouthfeel. The inclusion rate can vary from 2 – 12 % depending on the desired depth of the mouthfeel.

### Typical Analysis:

Parameter	Unit	Malted Rye	Malted Wheat	Toasted Barley
Moisture	%	≤ 8	≤ 9	≤ 13
Extract (dwt, 0.7mm grind)	L°/KG	≥ 220	≥ 220	≥ 250
Wort Colour (IOB 515ml)	EBC	≤ 40	≤ 50	≤ 2.6

# What's New

We are not only a global supplier of malt, but also of malted ingredients including malt extracts.

Malt extracts are becoming increasingly popular in brewing and are used primarily as brew extenders and for colour addition. At Muntons, we have recognised the importance of these products, particularly in the craft brewing sector, and have released a core range of malt extracts to ensure our customers can achieve their maximum potential.

For more in-depth calculations or recipe builds, please contact our sales and technical teams.

## Pale Ale Malt Extract

Muntons Pale Ale Malt Extract is a highly concentrated wort made from low colour spring barley malt. The malt is mashed to ensure industry standard composition and fermentability. The resulting wort is then concentrated by means of vacuum evaporation, this process enables removal of water without increasing the colour or imparting caramelisation. This product, upon re-dilution will behave identically to traditional brewers wort. Our Pale Ale Malt Extract has many uses in the brewery, from extending brew lengths and enabling high gravity brewing to a feed for yeast propagation and a priming sugar with the right composition for your yeast.

### Applications:

Muntons Pale Ale Malt Extract can be used as a direct replacement for malt with the added benefit of having a brewhouse efficiency of 100%. The best method for calculation of malt extract dosages is to calculate recipes as if you were to use Pale Ale Malt and then replace any malt that were not to fit into the mash tun with malt extract at a rate of:

$$1 \text{ KG Muntons (Variety) Pale Ale Malt} = \frac{\text{Brewhouse Efficiency}}{100} \text{ KG of Muntons Pale Ale Malt Extract.}$$

#### Typical inclusion calculations

0.31KG = +1 SG point in 1HL

0.51KG = +1 SG point in 1BB

For use in yeast propagation we recommend a dilution to 10degrees Brix/ 1.040 SG. This is achieved by diluting 1Kg of extract into 8.5L of water.

### Typical Analysis:

Parameter	Unit	Pale Ale
Colour (10% w/v solution)	EBC	≤ 7
Refractometric Solids	%	79.5 - 82
FAN (10% w/v solution)	%	0.15 - 0.20
pH (10% w/v solution)		5 - 6
Typical extract (calculated from refractometric solids)	L*/KG	312

## Dried Pale Ale Malt Extract

Muntons Dried Pale Ale Malt Extract is a fine soluble powder made by drying our liquid Pale Ale Malt Extract. The malt extract is made from Muntons Pale Ale Malt which is mashed to ensure industry standard composition and fermentability. The resulting wort is then atomised and gently dried with hot air in a chamber called a Spray Dryer. This process enables removal of water without increasing the colour or imparting caramelisation. This product, upon dilution will behave identically to traditional brewers wort. Muntons Dried Pale Ale Malt Extract has many uses around a brewery from extending brew lengths, increasing ABV in final product, enabling high gravity brewing and perfect for yeast propagation.

### Applications:

Muntons Dried Pale Ale Malt Extract can be used as a direct replacement for malt with the added benefit of no losses due to brewhouse efficiency. The best method for calculation of malt extract dosages is to calculate recipes as if you were to use Pale Ale Malt and then replace any malt that were not to fit into the mash tun with Dried malt extract at a rate of:

#### Typical inclusion calculations

0.26KG = +1 SG point in 1HL

0.43KG = +1 SG point in 1BB

For use in yeast propagation we recommend a dilution to 10degrees Brix/ 1.040 SG. This is achieved by diluting 1.1KG into 10L of water.

### Typical Analysis:

Parameter	Unit	Dried Pale Ale
Colour (10% w/v solution)	EBC	≤ 7
Moisture Content	%	≤ 5.5
pH (10% w/v solution)		5 - 6
Typical extract (calculated from refractometric solids)	L*/KG	360

## Roasted Malt Extract

Muntons Roasted Malt Extract is made from 100% Black Malt. For this product we use a specially designed mash profile to extract all of the colour, flavour and aroma from the grain. Due to the separation technology used the wort is particle free upon dilution. The wort is then concentrated using vacuum evaporation. This product is designed to enhance any beer that would benefit from more colour or roasted characteristics. Inclusion from as low as 0.1% will add colour and aroma. Up to 5% will make your beer as black as night with a strong roasted aroma and flavour.

### Applications:

Roasted Malt Extract can be added during the boil, ferment or in bright tank. Applications vary from colour and flavour enhancement to final product colour adjustments.

The dosage is + 1 EBC = 1.10KG Roasted Malt Extract into 100HL

### Typical Analysis:

Parameter	Unit	Roasted
Colour (10% w/v solution)	EBC	680 - 925
pH (10% w/v solution)		3.0 - 4.4
Refractometric Solids	%	45 - 54

## Ultra-Dark Malt Extract

Muntons Ultra-Dark Malt Extract is made from 100% Black Malt using a specially designed mash profile to enhance the extraction of colour over aroma. The wort is processed in our ultrafiltration system to further increase the colour to solids ratio creating a unique product. This process ensures an extremely high colour while keeping the flavour and aroma contribution very low. Muntons ultra-dark malt extract is a perfect solution for brewers and distillers looking for a clean label colour to replace the use of caramel colouring or carbon additions.

### Applications:

Due to the unique production process the recommended inclusion rates for this product are very low at less than 1%.

The dosage is + 1 EBC = 0.65KG Muntons Ultra Dark Malt Extract into 100HL

### Typical Analysis:

Parameter	Unit	Ultra Dark
Colour (10% w/v solution)	EBC	1200 - 1400
pH (10% w/v solution)		3.0 - 4.4
Refractometric Solids	%	45 - 54

# Wheat Malt Extract

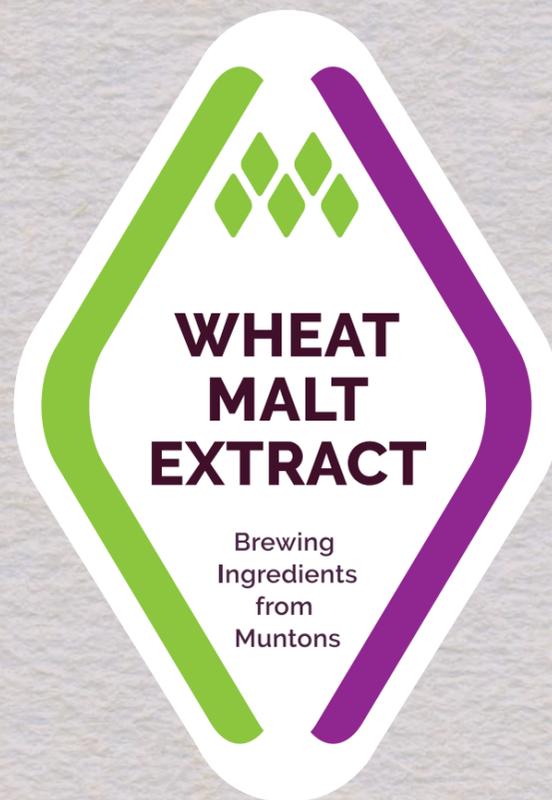

Muntons Wheat Malt Extract is made from 50% brewing quality wheat malt and 50% low colour spring barley malt. This product is mashed to extract the excess protein in the malted wheat resulting in a high quality malt extract with an increased protein load. It is then concentrated using vacuum evaporation to preserve the composition. It can be used as a base for wheat beers in breweries that struggle with slow runoff when using high amounts of wheat in the mash. At inclusion rates of 2-10% it can be used to increase the protein load of a wort, thus enhancing the body, mouthfeel, head formation and retention of the resulting beer.

## Applications:

This product can be used as a direct replacement for wheat malt, torrefied wheat and wheat flakes at a rate of 1:1 replacement. When the product is used as a base material for a wheat beer, we recommend calculating the recipe based on a litre degrees per KG equivalent of 315.

## Typical Analysis:

Parameter	Unit	Wheat Malt
Colour (10% w/v solution)	EBC	≤ 10
Refractometric Solids	%	79.5 - 82
pH (10% w/v solution)		5 - 6
Typical extract (calculated from refractometric solids)	L/KG	312

# Testimonials

## Northern Monk

*"We were introduced to Muntons dried malt extract a few years ago and have found it beneficial to our stout recipes in particular. It has proved a convenient way to boost the gravity and fermentables in wort when mash tun capacity reaches its limit and it reduces the need for multiple mashes or reduced brew lengths. It can allow for more complexity in a grist with less concerns over maintaining diastatic power and seems to add an extra depth to everything we use it in."*

Brian Dickson  
 Founder/Technical Direct  
**Northern Monk**

## Signature Brew

*"We started working with Muntons five years ago and have enjoyed a supportive, collaborative relationship ever since. We saw an immediate increase in efficiency when we switched to their malt and have always appreciated their unwavering dedication to quality."*

Tom Bott  
 Co-Founder  
**Signature Brew**

## Beartown Brewery

*"The malts that Muntons supply are top quality and have been consistent throughout the years in which we have used them, helping us to create a variety of award-winning beers on a national and international scale."*

*"The immeasurable part of Muntons value comes from their customer service. On many occasions we have mis-ordered or made mistakes which the fantastic Muntons team have rectified without issue. The technical support they offer, along with the nano brewery they have for development work is brilliant and has been a big help."*

*"Spear headed by a dynamic sales team trio, it's always a pleasure to see these guys at any event and we would whole heartedly recommend Muntons to anyone."*

Michael Manning & Joe Manning  
 Partners  
**Beartown Brewery**

## The Ferry Brewery

*"When Muntons approached us about using their Premium Sour Malt Extract we were certainly interested and had no reservations. We liked the idea that it would enable us to brew a sour beer without impacting on the brewery or our brewing schedule, so we gave it a go and after a few trial brews the beer came out better than expected. We entered our Raspberry Sour into the Scottish Beer Awards which was a great opportunity for us to enter something different to our signature beers and it was shortlisted in the final. We recommend Premium Sour Malt Extract and will definitely brew with it again!"*

Mark Moran  
 Head brewer/Owner  
**The Ferry Brewery**

# Innovations From Muntons

## Premium Sour Malt Extract

Beer drinkers these days seem to be drinking less but drinking better and there is a steadily growing trend towards beer 'sours' which are proving particularly popular in the USA.

Muntons brewing innovation ingredient, Premium Sour Malt Extract, can be used to simplify the process, reduce cost and remove risk. This product is designed to be added either during or after fermentation and introduces a refreshing 'soured' taste without the need for extended storage or the risks associated with using bacteria within the brewery.

Fabian Clark, Muntons Senior Brewing Technologist commented: "Our Sour Malt Extract is so simple to use, it's perfect for the craft brewer looking to brew soured beers in a quick and convenient way. This is without doubt one of the most innovative brewing products on the market today." He continued: "I would be happy to provide samples and more information to any brewer wanting to delve into this rapidly growing market segment."

Sour Malt Extract is made predominantly from Muntons malt extract blended with ingredients to safely and swiftly achieve the souring effect in a vast range of beer styles.

Muntons Premium Sour Malt Extract made from Pale Ale Malt and is modified with a blend of organic acids to drop the pH and enhance the flavour profile. This product is designed to enable the production of sour beer without the introduction of any bacteria into a brewery. The product is highly fermentable and adds a tangy and citrus acidity to beer. The product has also proved to be useful in mash pH regulation for dry and crisp beer styles.

### Applications:

The dosage of this product is dependant on the area of use and the desired effect.

There have been great results from full and partial malt replacements and also when using the extract in later stages to improve the flavour profile and consistency of sour beers.

pH regulation: 25Kg will drop a 500Kg malt bill mash by 0.6pH points.

$$\frac{10^{-\text{pHtarget}} - 10^{-\text{pHtarget}}}{10^{-\text{pHtarget}} - 10^{-\text{pHtarget}}} + \frac{10^{-\text{pHtarget}} - 10^{-\text{pHtarget}}}{10^{-\text{pHtarget}} - 10^{-\text{pHtarget}}}$$

\* Brewsize in L = KG of Easy Sour

### Typical Analysis:

Parameter	Unit	Sour Malt
Colour (10% w/v solution)	EBC	≤ 7
Refractometric Solids	%	60 - 69
pH (10% w/v solution)		≤ 3.5
Typical extract (calculated from refractometric solids)	L* / KG	250

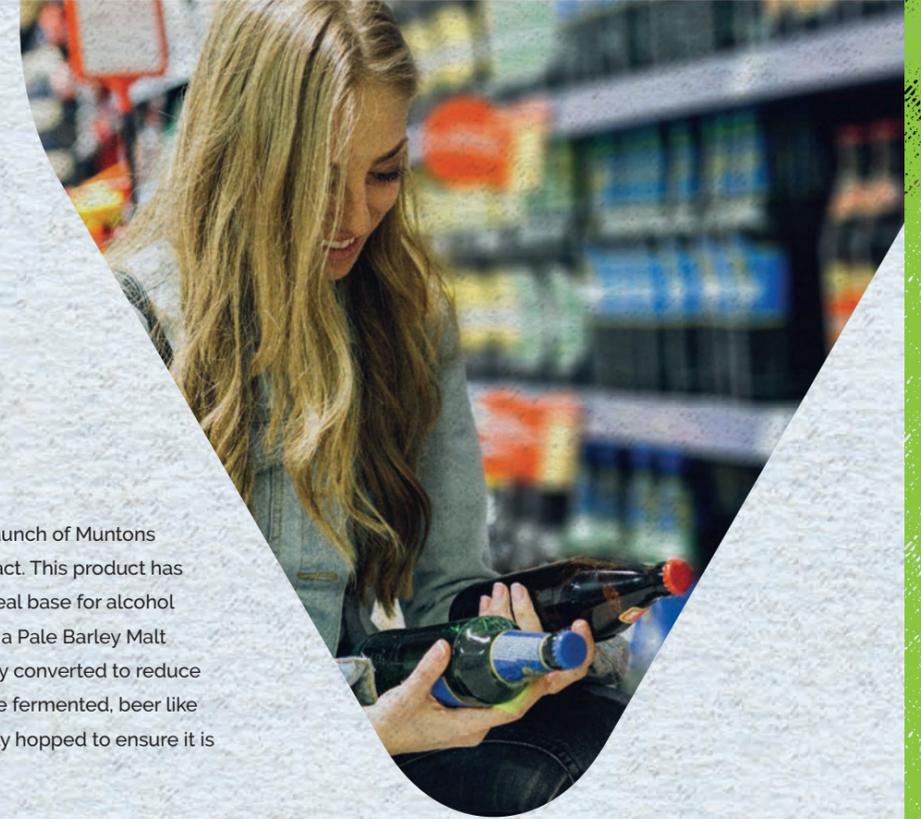

# Coming Soon...

## Premium Alcohol-Free Malt Extract

Muntons Premium Alcohol-Free Malt Extract is a versatile, alcohol free base from which you can create a range of great tasting, hassle-free no/low alcohol beers.

Now you can make amazing low alcohol beers without needing to invest in expensive equipment. What's more, this product delivers consistent results every time. So, there's no more time wasted on trial and error test brews!

Muntons Premium Alcohol-Free Malt Extract adds body, flavour and mouthfeel to deliver the awesome no/low beers your customers demand.

We are proud to announce the launch of Muntons Premium Alcohol-Free Malt Extract. This product has been developed to create the ideal base for alcohol free beer recipes. The product is a Pale Barley Malt Extract that has been enzymatically converted to reduce the sugar level and create a more fermented, beer like flavour. The product is then mildly hopped to ensure it is shelf stable.

### Applications:

The application is very much based upon personal flavour preference.

We have had great results when diluting the product down to 1.040 SG (14KG /HL /// 22KG /BBL) in the copper and boiling it as per standard wort. We gave the beer a normal hop treatment at this point to enable direct matching of a typical hop profile.

The product was chilled and not oxygenated on transfer to a fermenter. It was then further diluted down to 1.020 with water that had been previously dry hopped and dosed with ascorbic acid to scavenge any DO. For our own internal application the product was then filtered, packaged and pasteurised.

### Typical Analysis:

Parameter	Unit	Premium Alcohol Free
Colour (10% w/v solution)	EBC	≤10
pH (10% w/v solution)		≤4.4
Refractometric Solids	%	60 – 69

# Recipes

Our colleagues Erica Kintz (NPD Technologist, Stowmarket, UK) and Jason Chalifour (Sales Executive Brewing, East Coast, USA) have been busy brewing and we thought we'd share a recipe from them with you.

## Erica's Red Rye IPA

**Recipe:**  
Original Gravity 1.052 / 13 Plato

**Malt:**  
Extra Pale Malt 60%  
Pale Rye Malt 10%  
Munich Malt 20%  
Melanoidin Wheat 10%

**Hops:**  
Mosaic Boil 30 min / 22 IBU  
Mosaic Boil 15 min / 5 IBU  
Mosaic Whirlpool / 6 IBU

**Yeast:**  
S-04 Ale yeast

## Jason's Imperial Stout

**Recipe:**  
Original Gravity 1.110 / 26 Plato

**Malt:**  
Maris Otter® Pale 62% Crystal 150 4%  
Munich 13% Roasted Barley 4%  
Wheat Malt 9% Black Malt 4%  
Chocolate Malt 4% Crystal 400 4%

**Hops:**  
Nugget Boil 60 min / 44 IBU  
Northern Brewer Boil 30 min / 20 IBU  
Fuggles Boil 15 min / 8 IBU  
Phoenix Boil 5 min / 6 IBU

**Yeast:**  
S-04 Ale yeast

## Fabian's Kellerbier

**Recipe:**  
Original Gravity 1.044 / 11 Plato

**Malt:**  
Pilsner Malt 95%  
Melanoidin Wheat Malt 2.5%  
Cara Malt 2.5%

**Hops:**  
Hallertau Mittelfrueh Boil 60 min / 15 IBU  
El Dorado Boil 15 min / 10 IBU

**Yeast:**  
w34/70

## Muntons Sour

**Recipe:**  
Original Gravity 1.036 / 9 Plato

**Malt:**  
Muntons Super Pale Malt 75%  
Muntons Premium Sour Malt Extract 25%  
Cara Malt 2.5%

**Hops:**  
Cascade Boil 60 min / 10 IBU  
Cascade Boil 30 min / 10 IBU  
Amarillo End of Boil / 5 IBU

**Yeast:**  
Belle Saison Yeast

Add 10% Passion Fruit, Raspberries or Lemon at end of ferment – don't forget to account for the extra sugars in the ABV calculation.

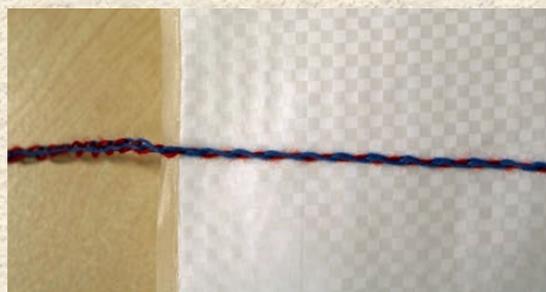

# Handling of Sacks

## 25kg polypropylene

1

Photo is a reverse view image

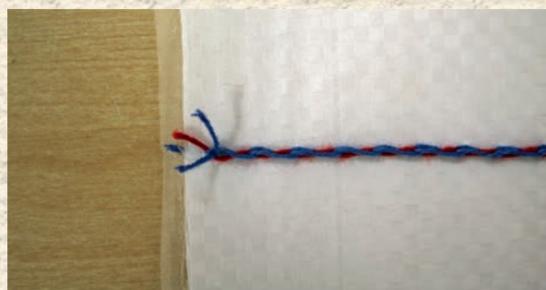

Stand behind the sack with the thickest stitch line facing away from you.

2

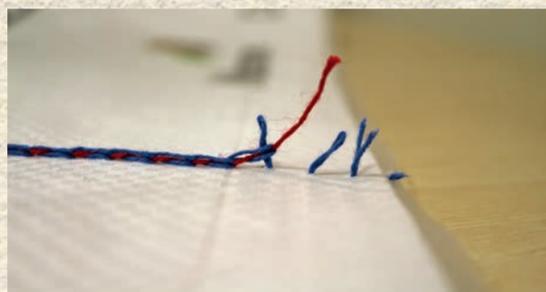

Photo is a reverse view image

Cut the thread with a sharp knife or scissors close to the edge of the bag on the right hand side.

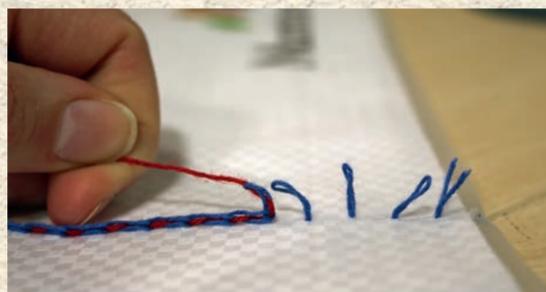

3

Once you have cut the stitching you should be left with something similar to the example to the right.

4

Pull the middle red thread to open the sack.

# Recycle Your Malt Sacks

Sustainability is a key part of the way Muntons does business.

We reduce and recycle as much of our own waste as possible with less than 0.1% going to landfill. We are acutely aware that although our malt sacks are made of a fully recyclable material the infrastructure within the UK simply isn't there so we have partnered with QCR to help provide a solution that not only enables you to recycle your sacks it could streamline your waste management overall saving time and money.

QCR Recycling Equipment is proud to partner with Muntons to provide a better waste management solution to craft brewers. A leading distributor of innovative waste and recycling equipment from premier manufacturers; QCR offers rental and purchase options on balers and compactors for a wide range of materials including PP sacks. With a QCR solution you could reduce your waste volume by up to 90%, cutting the amount of bins you require whilst lowering your waste and disposal costs. QCR look forward to sharing their industry knowledge and working with brewers who want a sustainable solution to their business waste.

For more information contact  
Mike Shutt, QCR Recycling Equipment Area Sales Manager.
