Energy Policy

Muntons plc has a strong and ongoing commitment to environmental protection as evidenced by our certification to ISO 14001:2015 which is extended to incorporate ISO50001.

This policy identifies our approach and commitment to continually improve energy performance and the energy management system and is subject to periodic review. It is supported by our Sustainability Statement which is updated annually. Our operations are energy intensive with 90% of our carbon footprint being energy related. The scope of this policy is our buildings, processes, supporting functions such as laboratory and offices at our Stowmarket and Bridlington sites.

1. This Energy Policy provides a framework for the setting and reviewing of objectives and energy targets.
2. Muntons will ensure the availability of information and necessary resources to set, review and achieve its objectives and energy targets.
3. Muntons aims to operate at the lowest feasible energy levels consistent with food safe and hygienic production subject to the availability of appropriate resources.
4. Energy saving is a key element of our operations that aims to continually improve our operational efficiency according to best available techniques and to minimise energy wastage.
5. Muntons will monitor its carbon footprint where linked to energy use and emissions of carbon dioxide via combustion activities. Muntons will remain compliant with all applicable national and European targets together with applicable legal and other requirements in relation to energy efficiency, energy use and energy consumption.
6. Muntons has an externally verified Science-based target to reduce its carbon emissions by 45% between 2010 and 2025 to protect the climate from temperature rise due to its activities and has set a company objective of achieving Net Zero by 2030.
7. Energy efficiency, energy usage and procurement is reviewed by the Board on a quarterly basis, with Energy Performance included in the monthly Operational Meetings.
8. Muntons seeks to embrace new environmentally energy efficient technology as it becomes available. When specifying new or replacement equipment or when planning major capital expenditure Muntons will consider energy performance at the design stage. When considering small appliances and office type equipment Muntons will endeavour to purchase the highest energy efficient equipment available at that time.
9. Muntons communicates its objectives, energy targets and performance to staff members through newsletters, town hall meetings, training and refresher courses. This policy is available to interested parties as appropriate.
